- Directions for Future Development
- Questions & Answers

Our Mandate

Our Team

- Our team consists of Abrar Chowdhry, Damon Ha, Eleonore Caclard, Nerin Kaur and Siyan Guo.

Our Mission

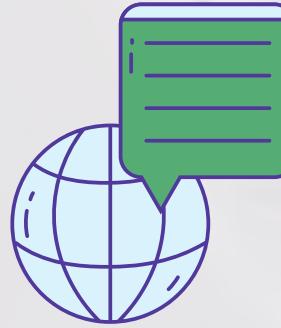

- We are the first step in providing initial settlement services to English-speaking newcomers.

Our Vision

- Our website aims to assist newcomers in Canada with their initial settlement. We strongly believe our services help play a determinant factor in relocation.
- With our website, new immigrants in Canada will be given every opportunity to create the conditions for their economic, cultural and social development and to reach their full potential.

Concept

Description

The purpose of this website is to assist newcomers and aid them in selecting the most preferred location to immigrate to in Canada. This website will show the following information to help these individuals make informed decisions for themselves and their loved ones:

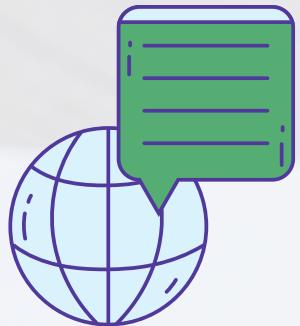

1. Location
2. Unemployment Rate
3. Diversity/Ethnocultural Statistics

Motivation for Development

Our motivation for this project is to focus on helping newcomers and immigrants settle in Canada while providing them resources to individuals and family communities. We can do this by helping them navigate new environments and help integrate them into their chosen communities.

Concept

User Story

- As a non-profit helping newcomer to settle in Canada. I want to be presented with an efficient app to better help newcomers to settle in their new communities based on newcomer's family criteria.

ACCEPTANCE TEST FOR USER STORY

- GIVEN Newcomers family
- WHEN I Enter the website
- THEN I find elements that contact, search and resources
- WHEN I select one of the elements
- THEN I find that the elements link to a certain page or website
- WHEN I search the city
- THEN I present unemployment rate, immigrants rate and crime severity indexes
- THEN I view all the information to understand the city
- THEN I compare multiple cities to make a final decision

Process

Breakdown of Tasks and Roles

- Siyan - Statistics Canada API & Walk Score API
- Eleonore - Google Maps API
- Damon - Search Page HTML/Design
- Abrar - Landing Page HTML/Design
- Nerin - Search Functionality & Local Storage

Challenges

- Narrowing the scope to fit the desired timeline
- GitHub Repository - Merging & conflicts
- Manipulating the API to ensure we display the appropriate data

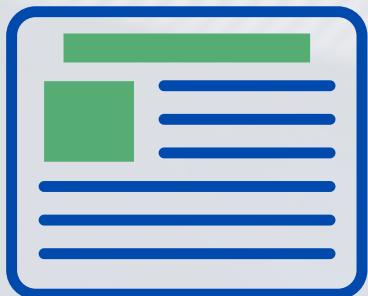

Technologies Used & Major Success

- Foundations for CSS, JQuery, Bulma
- Statistics Canada API & Google API
- Functional and linked landing page/search for MVP

Website/App DEMO

Directions for Future Development

Stretch Goals

- The website will be available in different languages other than English, for instance, French, Spanish, Farsi, and Korean
- Add Subscribe function for a weekly newsletter about immigration laws, news and success story
- Add a link to a website to provide language education (English and French)
- Include additional API regarding housing market that provides real estate estimation for buying and renting
